ABSTRACT

In 1980, a study was conducted to assess the academic performance of former Santa Ana College (SAC) students who transferred to the California State University (CSU) system or the University of California (UC) system in 1979-1980. The total number of transfer students to the CSU system was 1,343, a figure which had remained constant over the previous five years. Similar consistency was seen in the students' grade point averages (GPA's); on an average their GPA at the state universities was 2.72, representing a 0.13% decrease from their SAC average of 2.85. Of the CSU transfer students, 67% attended one school, CSU Fullerton, where most majored in Business Administration and related fields, such as Accounting, Finance, Management, and Marketing. In Fall 1978, the last year for which UC transfer data were available, 52 former SAC students transferred to the system. The average entering GPA's and university GPA's of the SAC transfer students were higher than those of other community college transfer students, and the university GPA's of those transfers who were eligible to enter the UC system upon high school graduation were comparable to those of UC native students. January 1981

SUMMARY

- There were 1343 former SAC students attending a CSUC during the 1979-80 academic year. This number has remained constant over the past five years.

- The average entering g.p.a. of the above students in 1979-80 was 2.85 and their average CSUC g.p.a. was 2.72. Those two measures have not changed significantly during the past five years.

- There were 52 former SAC students who entered the UC in Fall 1978, a similar number to the three prior years.

- The average entering and UC g.p.a.'s of SAC transfer students, eligible and ineligible from high school, to a UC were higher than those of other comparable community college transfer students.

- The academic performance of all community college transfer students who were eligible for the UC upon high school graduation compares favorably with that of UC natives.

- CSUF and UCI each receive two thirds of SAC's transfer students to those two university systems.

INTRODUCTION

The purpose of this report is to provide information about the academic performance of former Santa Ana College students who have transferred to the California State University (CSUC) and the University of California (UC). This report is historically published, using a standard format, every two years, using data provided by the CSUC and UC. Two current events have brought about a change in this standard format. First, the UC no longer provides the data from which parts of this report were created, and the data that they did provide was sketchy. Second, the transfer function of the community college has recently been under scrutiny, and increased related information is needed. Consequently, some information formerly provided in this report is no longer available, and some areas have been expanded.

The first section of the report deals with former SAC students who have transferred to the CSUC system, and the second with students who have transferred to a UC campus and are defined as chargeable to Santa Ana College.

CSUC

Table 1 shows the number of former SAC students who are in attendance at each CSUC campus for each academic year, their average CSUC g.p.a., and their average transfer g.p.a. The total number of transfer students from SAC, 1343 in 1979-80, has remained relatively constant over the past five years. Similarly, their transfer g.p.a.'s and CSUC g.p.a.'s have not changed significantly during the past five years. It is interesting to note the difference of average former SAC student g.p.a.'s at the various CSUC's. For example, their average g.p.a. at CSU Long Beach has been consistently higher than that at CSU Fullerton.

The largest number of SAC students, 895 in 1979-80 or 67% of all former SAC students who were attending the CSUC, attended CSU Fullerton, and the second largest number attended CSU Long Beach, 325, or 24%.

CSU statistical abstracts, included in the appendix, indicate that of the 1357 former SAC students in attendance at a CSUC in 1978-79, 571 or 42% of all those attending were first time new transfer.

Table 2 provides the number of SAC transfer students at CSU Fullerton, their transfer g.p.a. and CSUF g.p.a. by their CSUF major. While this major may or may not have been their SAC major, this table provides more specific data about former SAC students' academic progress. The largest number of students have majors in Business Administration and related fields such as Accounting, Finance, Management, and Marketing. Average CSUF g.p.a.'s are generally highest in the Humanities majors.

UC

Table 3 shows the number of Fall entrants from SAC at each campus. As can be seen, this information was not provided to community colleges after 1978-79. It can be seen, however, that in the Fall quarter 1978, 52 SAC former students had entered a UC, and this is a slight increase over previous years. Most of those students, 35, transferred to UC Irvine.

The data in Table 4 can be used to compare the performance of former SAC students attending the UC with the overall performance of all community college transfers at the UC. Former SAC students, whether ineligible of eligible for the UC at high school graduation, have higher g.p.a.'s at time of transfer and during their first quarter at the UC than their counterparts attending all UC's and attending UCI. It is also notable that community college transfer students' g.p.a.'s

have not decreased significantly from 1977 to 1978.

Table 5 provides more in-depth information about SAC transfer students to UCI, to which the large majority of SAC-UC transfer students articulate. This data shows that a total of 84 former SAC students are attending UCI in Fall quarter 1980. Of those, 30 are new students, another 14 were high school eligible to attend the UC and 40 were not. The eligible group shows a markedly smaller differential between transfer and UCI g.p.a. than that of ineligible group.

CONCLUSION

Recently there has been speculation in the literature that community college transfer students UC's and CSUC's are becoming fewer and that their academic performance and graduation rates are decreasing. The data presented in Tables 1, 3 & 4 address this issue specifically in regard to Santa Ana College transfer students. These tables provide evidence to the contrary for SAC. That is, it can be seen in Tables 1 & 3 that the number of SAC students transferring to the UC and CSUC for the past five years has not decreased. Nor has the average CSUC g.p.a. of former SAC students declined. The UC's, however, are no longer routinely providing community colleges with performance data of former students. Consequently, evidence for this assertion is not available. Table 4 indicates that, on the average, SAC students at the UC perform better than their counterparts and that community college transfer students' g.p.a.'s at the UC did not decline appreciably from 1977 to 1978.

It is important to note performance differences between three groups of students: native university students, community college transfer students eligible for the university at high school graduation, and community college transfer students ineligible for the university at high school graduation. Significant performance differences occur most often between the eligible and ineligible

groups and not between the eligible and native groups. Further research is needed to establish the comparability of all three groups to one another. The number of ineligible students attending the community colleges and transferring to universities may be increasing and the number of eligible students doing likewise decreasing. This would have important implications for future research and for understanding transfer students' progress.

The data provided in this study demonstrate that SAC transfer students are performing, on the average as well or better than their community college counterparts. However, the primary conclusion that emerges is that there exists various perpectives by which to examine and analyze the available data, and further study is necessary.

* 1978-79 was the last year that the U.C.'s will provide standardized performance data on a regular basis. Consequently, this table is being phased out of SAC's regular reports. The data that has been included here is sparce because g.p.a.'s by U.C. campus are not provided when less than five transfer students have enrolled. Futhermore, this data has never been student specific so transfer g.p.a.'s are impossible to obtain. Unlike the similar table for SAC students at the CSUC, students reported here for the U.C.'s are only the first-time, Fall quarter entrants, not all SAC students enrolled.
